## PROFESSIONAL SUMMARY

Seasoned Technical Staff Software Engineer and Secure Systems Architect with 14+ years in the semiconductor industry.

- Specializes in high-performance system-on-chip software, system security & device drivers.
- Adept at Python, system integration, DevOps, and cloud architectures.
- Proven track record leading cross-functional teams from conception to implementation and customer delivery.
- Natural leader, strong communicator and proactive team player dedicated to delivering top-notch results.

A detailed professional history with project details is available in my online profile at embeddedinn.com/cv.

## SKILLS & TECHNOLOGIES

- Programming Languages: C, Python, Shell Scripting, HTML, JavaScript.

- Security: Secure Boot, Secure Firmware Update, Secure Communication.

- Firmware Development: Embedded C, RTOS, Device Drivers, Bootloaders, Linux.

- Embedded Systems: MIPS, RISC-V, Microcontrollers, SoCs, Wi-Fi, BLE, IoT.

- Version Control Systems : Git (Bitbucket, GitHub, GitLab).

- Debugging and Testing: JTAG, GDB, Lauterbach, JIRA, Jenkins, Confluence.

- Communication Protocols: UART, SPI, I2C, USB, Ethernet, TCP/IP, MQTT, Wi-Fi, BLE.
- **Problem-solving**: System Architecture, Design, and Debugging.
- Cloud Technologies : AWS, Azure IoT, Google Cloud IoT, Docker.
- Tools: MPLAB X, TPDS, Jupyter Notebook, Visual Studio Code, WSL.
- Operating Systems : Linux, FreeRTOS.

#### WORK EXPERIENCE

#### Technical Staff Engineer - Software

Microchip Technology Inc. , Burnaby, British Columbia, Canada April 2022 - Present

- Security sub-system firmware architect for the first-generation RISC-V based High-Performance Spaceflight Computing (HPSC) System-on-Chip (SoC)
- Developed a heterogeneous RISC-V core software emulation platform using QEMU, driving pre-silicon development and early customer engagement.
- Engineered robust early-boot architecture for Linux and application software systems, optimizing system resilience.
- End-to-end design and development of a secure system boot ROM.
- Implemented a buildroot-based Linux System on QEMU and Protium emulation systems, ensuring easy pre-silicon development.
- Created a bespoke Debian distribution and apt-repo for a RISC-V system, enhancing performance and compatibility.
- Established release infrastructure and DevOps systems, streamlining processes for early customer adoption.

Vysakh P Pillai 2

#### Technical Staff Engineer - Software

Microchip Technology India Pvt. Ltd., Bangalore, India February 2015 - April 2022

- Applications lead for new Wi-Fi and BLE IoT silicon development at the wireless solutions group.

- E2E Systems architect for cloud, serverless & mobile connectivity, end-node authentication & device security.
- Post-silicon bring-up and validation of SoC, RF modules, and development boards.
- Design and architecture of bootloaders, OTA, and compiler features for RTOS-based and bare-metal secure wireless solutions.
- Voice control interfacing using Amazon Alexa<sup>™</sup> and Google Assistant<sup>™</sup>.
- Manufacturing coordination and lead architect for apps DevOps framework.
- Extensive customer interaction for new product development and support.

#### Software Engineer

Cisco Systems India Pvt Ltd, Bangalore, India August 2011 - February 2015

- Linux Device Driver development for high-end set-top box peripherals.
- Development and integration of networked personalization features for STBs.
- Security module integration of cable card and legacy security modules.
- End-to-end system integration and performance optimization.
- Build and test automation, process improvement, and release management.
- Building proof of concepts for next-generation product ideas.

## Software Engineer

Sasken Technologies Ltd, Bangalore, India March 2010 - August 2011

- Implementation of Nokia S40 USB device drivers.
- Maintenance activities on existing S40 media connectivity stack.
- Forward and backward porting of drivers and protocol layers to support device models.
- Client interaction to ensure seamless feature delivery.

# **EDUCATION**

#### Master of Science, Digital Design and Embedded System

Manipal Academy of Higher Education, Manipal, India January 2011 - February 2013

# Bachelor of Technology, Electronics and Communication Engineering

Amrita Vishwa Vidyapeetham, Kerala, India May 2005 - May 2009

## Activities

- Full-Stack System Design Regularly contribute to the silicon-to-cloud system design community through blog posts at embeddedinn.com and open-source projects in github.com/vppillai.
- Woodworking Hobbyist woodworker, creating custom furniture and home decor.
- Travel Enthusiastic traveler, exploring new places and cultures.
- Training Regularly conduct training sessions on system design, high-performance computing and system security for junior engineers and new graduates.
